

# School-based health center (SBHC) logic model

This is an example logic model template that can guide development of an SBHC's vision, mission, goals, and desired outcomes.

Students in Elm High School have significant physical and behavioral health challenges and do not have timely access to comprehensive primary and behavioral healthcare services. This has contributed to high rates of chronic absenteeism.

## SBHC will provide:

- Primary care and behavioral health services
- Serve students. school personnel, and students' family

SBHC will close gaps in access to health care and improve health, education, and overall well-being outcomes for students and other populations served.

- Secure start-up funding
- Design and build an SBHC that meets identified needs
- Develop a plan for long-term SBHC sustainability

### **Short term**

SBHC has a robust business plan by 6/1/2025

#### Mid term

- 70% of students have consents on file in Year 2
- 50% of consented students have visited the SBHC in Year 3

#### Long term

Absenteeism has significantly decreased for students who have visited the SBHC
